

# Downhole Filter Sub

The Wellpro Group Downhole Filter minimises the tendency to plug small nozzles, motors and orifices in the downhole tool string.

It will filter particles down to 200 microns, helping to improve equipment life and operations dependability, as well as reducing downtime.

## Features and Specifications

- Debris restriction from critical BHA components
- Reduces downtime due to plugging off

|                        |         |               |              |
|------------------------|---------|---------------|--------------|
| Tool Size (in)         | 1.688   | 2.125         | 2.875        |
| End Connection         | 1" AMMT | 1 - 1/2" AMMT | 2 - 3/8" PAC |
| Tensile Strength (lbs) | 20,000  | 124,000       | 145,000      |
| Mesh Filter (Micron)   | 200     | 200           | 200          |
| Length (ft)            | 1.25    | 1.25          | 1.41         |

The equipment specifications and information advised in this document are for information only and may be liable to change without notice. Additional micron sizes, tool sizes and connection variations are available upon request.
